

Complete Backyard Renovation

Vložil frankis - 29/04/2026 10:35

My backyard is just grass and mud. I want to install a large patio with seating area and a walkway to the garden. I need a contractor who understands patio design, drainage, and uses HPB bedding instead of regular sand. Who serves the area northwest of Toronto? I want a five year warranty and a company that shows photos of completed projects. Affordable rates for a big job.

Turning a muddy backyard into a functional patio space was one of the best upgrades I've done, but choosing the right contractor made all the difference. I needed someone who understood not just installation, but also layout and drainage because water used to pool everywhere. The company I hired used HPB bedding instead of regular sand, which improved drainage and stability a lot. They also helped design a seating area that actually fits the space naturally. At one stage <https://oakshs.ca/vaughan-interlocking-services/> I made sure to review portfolios and look for real examples of large patio projects before deciding. That gave me confidence they could handle a bigger job. The finished space is now solid, clean, and usable even after heavy rain, which solved my original problem completely.
